1 PyPalEx: The Python Palette Extractor

1.1 Description

PyPalEx is a tool for extracting color palettes from images and generating a JSON format file with light and dark color themes. This tool is intended to be OS independent, for use by the tech community for developing their own custom theme managers or by artists who want to extract color palettes for their art from images, pictures or wallpapers they adore.

5.1.1 Detailed Description

Python Palette Extractor: extracts color palettes from images.

PyPalEx is a tool for extracting color palettes from images and generating a JSON format file with light and dark color themes. This tool is intended to be OS independent, for use by the tech community for developing their own custom theme managers or by artists who want to extract color palettes for their art from images, pictures or wallpapers they adore.

5.2 pypalex.__main__ Namespace Reference

Functions

main ()

Main script function.

• handle_args ()

Handles the arguments passed to PyPalEx.

extract_color_palettes ()

Handles color extraction from image(s).

setup_argument_parser ()

Sets up the argument parser for command line arguments.

check_sources (filepaths, path=None)

Checks each of the sources provided and removes any bad sources.

check_path (path)

Check the path to make sure it exists.

• set_global_args (args)

Sets the global variables using the arguments.

check_source (filepath)

Checks to make sure the path leads to a file.

Variables

• list EXTRACTORS = []

List of Extractor class objects for each individual image.

• list PROPER_IMAGES = []

List of real/existing image file path(s).

• list FILENAMES = []

List of image filenames.

• list OUTPUT_FILEPATHS = []

List of output file path(s) for each image.

• str OUTPUT PATH = "

The path to the output directory where all JSON files will be saved.

str OUTPUT_TAIL = "-color_palette.json"

The tail to append to each output filepath.

• bool SAVE CHECK = False

Flag to check if user wants to save extracted color palettes.

• bool SHOW_PREVIEW = False

Flag to show a preview of extracted palettes.

• bool PASTEL L = False

Flag to convert light color palette to pastel.

bool PASTEL_N = False

Flag to convert normal color palette to pastel.

• bool PASTEL D = False

Flag to convert dark color palette to pastel.

• bool SAT_PREF_L = False

Flag that gives preference to more saturated colors of the light color palette.

bool SAT PREF N = False

Flag that gives preference to more saturated colors of the normal color palette.

• bool SAT_PREF_D = False

Flag that gives preference to more saturated colors of the dark color palette.

5.2.1 Function Documentation

check_path()

```
check_path (
          path )
```

Check the path to make sure it exists.

Parameters

path The path to a directory.

Returns

True if the path exists and is not a file, False otherwise.

check_source()

```
check_source (
          filepath )
```

Checks to make sure the path leads to a file.

Parameters

filepath	Path to file with filename and file extension.
----------	--

Returns

True if file exists, False otherwise.

check_sources()

```
check_sources (
     filepaths,
     path = None )
```

Checks each of the sources provided and removes any bad sources.

Any filepaths or source files that are not images or do not exist get removed.

Parameters

filepaths	List of file paths.
path	A path to the images, if it is provided.

Returns

True if all/some sources are good, False if all sources are bad.

extract_color_palettes()

```
extract_color_palettes ( )
```

Handles color extraction from image(s).

handle_args()

```
handle_args ( )
```

Handles the arguments passed to PyPalEx.

main()

```
main ( )
```

Main script function.

set_global_args()

```
set_global_args (
          args )
```

Sets the global variables using the arguments.

Parameters

```
args User-supplied arguments.
```

setup_argument_parser()

```
setup_argument_parser ( )
```

Sets up the argument parser for command line arguments.

Returns

A command line argument parsing object.

5.2.2 Variable Documentation

EXTRACTORS

```
list EXTRACTORS = []
```

List of Extractor class objects for each individual image.

FILENAMES

```
list FILENAMES = []
```

List of image filenames.

OUTPUT_FILEPATHS

```
list OUTPUT_FILEPATHS = []
```

List of output file path(s) for each image.

OUTPUT_PATH

```
str OUTPUT_PATH = ''
```

The path to the output directory where all JSON files will be saved.

OUTPUT_TAIL

```
str OUTPUT_TAIL = "-color_palette.json"
```

The tail to append to each output filepath.

PASTEL_D

```
bool PASTEL_D = False
```

Flag to convert dark color palette to pastel.

PASTEL_L

```
bool PASTEL_L = False
```

Flag to convert light color palette to pastel.

PASTEL_N

```
bool PASTEL_N = False
```

Flag to convert normal color palette to pastel.

PROPER_IMAGES

```
list PROPER_IMAGES = []
```

List of real/existing image file path(s).

SAT_PREF_D

```
bool SAT_PREF_D = False
```

Flag that gives preference to more saturated colors of the dark color palette.

SAT_PREF_L

```
bool SAT_PREF_L = False
```

Flag that gives preference to more saturated colors of the light color palette.

SAT_PREF_N

```
bool SAT_PREF_N = False
```

Flag that gives preference to more saturated colors of the normal color palette.

SAVE_CHECK

```
bool SAVE_CHECK = False
```

Flag to check if user wants to save extracted color palettes.

SHOW_PREVIEW

```
bool SHOW_PREVIEW = False
```

Flag to show a preview of extracted palettes.

5.3 pypalex.arg_messages Namespace Reference

Functions

• bad source message ()

Generates an error message if the sources provided were not images.

bad_path_message ()

Generates an error message if the directory provided is not a valid directory.

no_args_help_message ()

Generates a help message if no arguments were presented.

5.3.1 Function Documentation

bad_path_message()

```
bad_path_message ( )
```

Generates an error message if the directory provided is not a valid directory.

Returns

The "bad directory" message.

bad_source_message()

```
bad_source_message ( )
```

Generates an error message if the sources provided were not images.

Returns

The "bad sources" message.

no_args_help_message()

```
no_args_help_message ( )
```

Generates a help message if no arguments were presented.

Returns

The "no arguments" help message.

```

YELLOW_RGB

```
list YELLOW_RGB = [255, 234, 0]
```

5.5 pypalex.conversion_utils Namespace Reference

Functions

```
• rgb_to_hsv (rgb_array)
```

Converts RGB array [r,g,b] to HSV array [h,s,v].

hsv_to_hex (hsv_array)

Convert HSV array [h,s,v] to HEX string 'ffffff'.

hex_to_rgb (hex_str)

Convert HEX string 'ffffff' to RGB array [r,g,b].

hsv_to_rgb (hsv_array)

Convert HSV array [h,s,v] to RGB array [r,g,b].

rgb_to_hex (rgb_array)

Convert RGB array [r,g,b] to HEX string 'ffffff'.

5.5.1 Function Documentation

hex_to_rgb()

```
\label{eq:hex_str} \begin{array}{ll} \text{hex\_rgb (} \\ & \text{hex\_str )} \end{array}
```

Convert HEX string 'ffffff' to RGB array [r,g,b].

HEX string is in the set ["000000", "ffffff"]. RGB where [r,g,b] are in the set [0, 255].

hex_str	HEX string 'ffffff'.
---------	----------------------

Returns

RGB array [r,g,b].

hsv_to_hex()

Convert HSV array [h,s,v] to HEX string 'ffffff'.

HSV where h is in the set [0, 359] and s, v are in the set [0.0, 100.0]. HEX string is in the set ["000000", "fffffff"].

Parameters

```
hsv_array HSV array [h,s,v].
```

Returns

A HEX string.

hsv_to_rgb()

```
\label{eq:hsv_array} \verb| hsv_array | )
```

Convert HSV array [h,s,v] to RGB array [r,g,b].

HSV where h is in the set [0, 359] and s, v are in the set [0.0, 100.0]. RGB where [r,g,b] are in the set [0, 255]. Formula adapted from https://www.rapidtables.com/convert/color/hsv-to-rgb.html

Parameters

```
hsv_array HSV array [h,s,v].
```

Returns

RGB array [r,g,b].

rgb_to_hex()

Convert RGB array [r,g,b] to HEX string 'ffffff'.

RGB where [r,g,b] are in the set [0, 255]. HEX string is in the set ["000000", "fffffff"].

Parameters

```
rgb_array RGB array [r,g,b].
```

Returns

A HEX string.

rgb_to_hsv()

Converts RGB array [r,g,b] to HSV array [h,s,v].

RGB where [r,g,b] are in the set [0, 255]. HSV where h is in the set [0, 359] and s, v are in the set [0.0, 100.0]. Formula adapted from https://www.rapidtables.com/convert/color/rgb-to-hsv.html

Parameters

```
rgb_array RGB array [r,g,b].
```

Returns

HSV array [h,s,v].

5.6 pypalex.extraction_utils Namespace Reference

Functions

• extract_ratios (hsv_img_matrix_2d)

Extracts the ratios of hues per pixel.

construct_base_color_dictionary (hsv_img_matrix_2d)

Constructs dictionary of base colors from an array of HSV pixel values.

extract_color_palettes (base_color_dict, sat_pref_list)

Extracts dominant light, normal, dark color palettes from each of the base colors.

check_missing_colors (base_color_dict, extracted_colors_dict)

Checks for any missing colors in the base color dictionary and borrows them from the surrounding colors.

• generate_remaining_colors (extracted_colors_dict, ratios)

Generate the remaining black and white, and background and foreground colors.

extract_color_types (hsv_base_color_matrix_and_sat_prefs)

Extracts the dominant color types from a base color.

• get left and right colors (origin color name)

Gets the color names of the colors that are to the left and right of the originating color.

borrow_color (extracted_colors_dict, origin, borrow_left, borrow_right)

Borrows a color from one of the extracted color types of the base colors.

get_dominant_hue (extracted_colors_dict, ratios)

Calculates the dominant hue.

• generate_black_and_white (dominant_hue)

Generates black and white color types using the dominant hue.

• generate_background_and_foreground (dominant_hue, complementary_hue)

Generates the background and foreground colors.

sort_by_sat_and_bright_value (hsv_base_color_matrix)

Sorts the colors by their saturation and brightness values.

extract_dominant_color (hsv_color_type_matrix, sat_pref)

Extracts the dominant color from a color type.

check_missing_color_types (light_color, norm_color, dark_color, black_color, achromatic_light, achromatic
 —norm, achromatic_dark, achromatic_black)

Checks to make sure all the color types have been properly set.

• calculate_centroid (hsv_color_type_matrix)

Calculates the centroid for a color type.

find_closest_to_centroid (hsv_color_type_matrix, centroid, sat_pref)

Finds a color from a color type that is closest to the centroid.

5.6.1 Function Documentation

borrow_color()

Borrows a color from one of the extracted color types of the base colors.

Parameters

extracted_colors_dict	A Dictionary of extracted colors.
origin	The name of the originating color.
borrow_left	The name of the color to borrow from, to the left of origin.
borrow_right	The name of the color to borrow from, to the right of origin.

Returns

A numpy array of a borrowed color.

calculate centroid()

Calculates the centroid for a color type.

|--|

Returns

List of centroid color values in [h,s,l] format.

check_missing_color_types()

Checks to make sure all the color types have been properly set.

If a color type is missing, then it will be derived from the existing color types.

Note

I'm using the normalization formula from https://stats.stackexchange.com/a/281164

Parameters

light_color	A numpy array of a light color type in [h,s,v] format.
norm_color	A numpy array of a normal color type in [h,s,v] format.
dark_color	A numpy array of a dark color type in [h,s,v] format.
black_color	A numpy array of a black color type in [h,s,v] format.
achromatic_light	A numpy array of an achromatic light color type in [h,s,v] format.
achromatic_norm	A numpy array of an achromatic normal color type in [h,s,v] format.
achromatic_dark	A numpy array of an achromatic dark color type in [h,s,v] format.
achromatic_black	A numpy array of an achromatic black color type in [h,s,v] format.

check_missing_colors()

Checks for any missing colors in the base color dictionary and borrows them from the surrounding colors.

base_color_dict	A dictionary of 2D numpy arrays for each of the base colors.
extracted_colors_dict	A Dictionary of extracted colors.

construct_base_color_dictionary()

```
{\tt construct\_base\_color\_dictionary~(} \\ {\tt \it hsv\_img\_matrix\_2d~)}
```

Constructs dictionary of base colors from an array of HSV pixel values.

Base colors are classified as [red, yellow, green, cyan, blue, magenta].

Parameters

Returns

Dictionary of base colors.

extract_color_palettes()

Extracts dominant light, normal, dark color palettes from each of the base colors.

Parameters

base_color_dict	A dictionary of 2D numpy arrays for each of the base colors.
sat_pref_list	List of saturation preference flags for light, normal, dark color palettes.

Returns

Dictionary of light, normal, dark color palettes for each of the base colors.

extract_color_types()

Extracts the dominant color types from a base color.

A color type is either a light, normal, or dark version of a base color.

hsv_base_color_matrix_and_sat_prefs	A tuple of a 2D numpy array of a base color in [h,s,v] format and a list
	of saturation preference flags for light, normal, dark color palettes.

Returns

List of dominant numpy array color types in [h,s,v] format.

extract_dominant_color()

Extracts the dominant color from a color type.

A color type is either a light, normal, or dark version of a base color.

Parameters

hsv_color_type_matrix	A 2D numpy array of a color type in [h,s,v] format. @para sat_pref A saturation
	preference flag for one of the light, normal, dark color palettes.

Returns

A numpy array of a dominant color from a color type in [h,s,v] format.

extract_ratios()

Extracts the ratios of hues per pixel.

Parameters

umpy array of pixels from an image in [h,s,v] format.	hsv_img_matrix_2d
---	-------------------

Returns

Dictionary of hue ratios (percentage) in set [0.0, 100.0]

find_closest_to_centroid()

```
centroid,
sat_pref )
```

Finds a color from a color type that is closest to the centroid.

Note

Possible feature addition in the future, where the user can have the option to input their preferred saturation (e.g. pref_sat) and it can be used to replace the point_of_symmetry_of_parabola in the parabola formula. If saturation is preferred (e.g. sat_pref) but no preferred saturation is set by the user, then the default should be 60. And if saturation is not preferred, then that value should be set to None.

Parameters

hsv_color_type_matrix	A 2D numpy array of a color type in [h,s,v] format.
centroid	List of centroid color values in [h,s,l] format. @para sat_pref A saturation preference
	flag for one of the light, normal, dark color palettes.

Returns

List of all the colors in [h,s,v] format that are the shortest distance away from the centroid.

generate_background_and_foreground()

Generates the background and foreground colors.

The background and foreground colors are based on the dominant hue in an image and it's complimentary hue. The saturation and brightness values for the background and foreground colors need to be hardcoded to be easier to look at.

Parameters

dominant_hue	The dominant hue of an image.
complementary_hue	The complimentary hue to the dominant hue.

Returns

Numpy array of light and dark background and foreground colors in [h,s,v] format.

generate_black_and_white()

Generates black and white color types using the dominant hue.

The saturation and brightness values, for the black and white color types, needs to be hardcoded in order to not interfere with the background and foreground colors.

Parameters

dominant_hue

Returns

List of black and white color types in [h,s,v] format.

generate_remaining_colors()

Generate the remaining black and white, and background and foreground colors.

Parameters

extracted_colors_dict	A Dictionary of extracted colors.
ratios	A Dictionary of ratios of the base colors in the image.

get_dominant_hue()

Calculates the dominant hue.

The dominant hue, also referred to as the average hue, is based on the color ratios and the colors extracted from an image.

Parameters

extracted_colors_dict	A Dictionary of extracted colors.
ratios	A Dictionary of ratios of the base colors in the image.

Returns

The dominant hue in an image.

get_left_and_right_colors()

Gets the color names of the colors that are to the left and right of the originating color.

There are two ways to think about left and right on a color wheel: from the inside looking outward and from the outside looking inward. This has an effect on how we think of the linear format of the color wheel. For this package we will think about left and right colors using the latter option.

Parameters

origin_color_name	The name of the originating color.
-------------------	------------------------------------

Returns

List of color names that are to the left and right of the originating color.

sort_by_sat_and_bright_value()

Sorts the colors by their saturation and brightness values.

A color type is either a light, normal, dark, black or achromatic version of a base color.

Parameters

hsv_base_color_matrix	A 2D numpy array of a base color, where each element is a list in [h,s,v] format.

Returns

A list of color types, where each element is a 2D numpy array of a color type whose elements are a list in [h,s,v] format.

5.7 pypalex.Extractor Namespace Reference

Classes

class Extractor

Extracts colors given a matrix of HSV values extracted from an image.

5.8 pypalex.file_utils Namespace Reference

Functions

```
• save_palette_to_file (color_palette, output_filepath)
```

Saves color palette to json file.

• save_default_scheme_to_file (color_palette, output_filepath)

Saves color palette to json file as default color schemes.

5.8.1 Function Documentation

save_default_scheme_to_file()

Saves color palette to json file as default color schemes.

Constructs 2 default color schemes, light and dark, using the color palettes and saves them to a json file.

Note

If a file with the same name already exists, it is overwritten.

Parameters

color_palette	Dictionary of light, normal, and dark color palettes.
output_filepath	Output file path with filename of where to store color palette.

save_palette_to_file()

Saves color palette to json file.

Note

If a file with the same name already exists, it is overwritten.

Parameters

color_palette	Dictionary of light, normal, and dark color palettes.
output_filepath	Output file path with filename of where to store color palette.

5.9 pypalex.image_utils Namespace Reference

Functions

process_image (image)

Processes PIL Image object.

rescale_image (image)

Rescales image to a smaller sampling size while maintaining aspect ration.

• process_helper (rgb_matrix_2d)

Helper function for multiprocessing conversion operations.

5.9.1 Function Documentation

process_helper()

Helper function for multiprocessing conversion operations.

Helps convert from [r,g,b] to [h,s,v].

Parameters

```
rgb_matrix_2d A 2D matrix of rgb values.
```

Returns

A numpy array/2D matrix of converted [h,s,v] values.

process_image()

```
process_image (
          image )
```

Processes PIL Image object.

 $\begin{tabular}{ll} \textbf{Multiprocessing example from:} & https://stackoverflow.com/a/45555516 \\ \end{tabular}$

Parameters

image PIL Image object.

Returns

2D numpy array of [h,s,v] arrays (pixels) from image.

rescale_image()

```
rescale_image (
          image )
```

Rescales image to a smaller sampling size while maintaining aspect ration.

Note

The math behind rescaling the image came from: https://math.stackexchange. \leftarrow com/a/3078131

Parameters

image	PIL Image object.
-------	-------------------

Returns

Tuple of the new width and height of image.

5.10 pypalex.print_utils Namespace Reference

Functions

print_default_scheme_preview (hex_color_palette)

Prints the default color schemes to the terminal.

get_color_escape (rgb_array, background=False)

Constructs ANSI color escape code based on an RGB list.

get_rgb_palette (hex_color_palette)

Constructs an RGB [r,g,b] palette dictionary using a hex palette dictionary.

• get_ansi_color_codes (rgb_color_palette)

Constructs a ANSI escape code dictionary using a RGB [r,g,b] palette dictionary.

• generate_panes (background_ansi_color, ansi_colors1, ansi_colors2)

Generates panes based on two sets of ANSI color escape codes.

5.10.1 Function Documentation

generate_panes()

Generates panes based on two sets of ANSI color escape codes.

Note

The terminal needs to be able to display ASCII characters and ANSI colors for this to be useful.

background_ansi_color	The background ANSI color escape code.
ansi_colors1	List of ANSI color escape codes.
ansi_colors2	List of ANSI color escape codes.

Returns

List of strings of panes with ASCII and ANSI escape codes.

get_ansi_color_codes()

```
{\tt get\_ansi\_color\_codes} \ \ ( \\ {\tt rgb\_color\_palette} \ )
```

Constructs a ANSI escape code dictionary using a RGB [r,g,b] palette dictionary.

Parameters

	rgb_color_palette	A dictionary of light, normal and dark color palettes in RGB [r,g,b] format.
--	-------------------	--

Returns

A dictionary of ANSI color escape codes.

get_color_escape()

Constructs ANSI color escape code based on an RGB list.

An RGB [r,g,b] list is used to generate an ANSI escape code of the RGB color for use in the terminal CLI. The basic format for these codes depends on if it will be used for foreground or background color. Use 033[48;2;r;g;bm] for the background color.

Note

For more information about these ANSI escape codes, here are some sources: https←://stackoverflow.com/questions/4842424/list-of-ansi-color-escape-sequences/33206814#https://stackoverflow.com/questions/45782766/color-python-output-given-rrggbb-hex-v

Parameters

rgb_array	RGB array [r,g,b].
background	Flag for if the RGB color is for a background or not.

6 Class Documentation 27

Returns

ANSI escape code of the RGB color.

get_rgb_palette()

Constructs an RGB [r,g,b] palette dictionary using a hex palette dictionary.

Parameters

hex_color_palette A dictionary of color palettes in hex format.

Returns

A dictionary of colors in RGB [r,g,b] format.

print_default_scheme_preview()

```
\label{lem:preview} print\_default\_scheme\_preview \ ($$hex\_color\_palette$ )
```

Prints the default color schemes to the terminal.

Prints a preview of the extracted color palettes to the user's terminal screen using ANSI escape codes.

Note

The terminal needs to be able to display ASCII characters and ANSI colors for this to work.

Parameters

hex_color_palette A dictionary of light, normal, and dark color palettes in hex format.

6 Class Documentation

6.1 Extractor Class Reference

Extracts colors given a matrix of HSV values extracted from an image.

Public Member Functions

• __init__ (self, hsv_img_matrix_2d, output_filepath, pastel_light=False, pastel_normal=False, pastel_dark=False, sat_pref_light=False, sat_pref_dark=False)

Extractor Constructor.

• run (self)

Main method for Extractor class.

check_pastel_conversion (self)

Checks to see if any of the palettes should be converted to pastel.

construct_palette_dictionary (self)

Constructs a dictionary of all the extracted color palettes in hex format.

· construct scheme dictionary (self)

Constructs a dictionary of color schemes by combining color palettes.

convert_pastel_light (self)

Converts light palette to pastel.

· convert_pastel_normal (self)

Converts normal palette to pastel.

convert pastel dark (self)

Converts dark palette to pastel.

convert_pastel (self, hsv_color)

Converts/normalizes HSV color to pastel.

Public Attributes

• hsv_img_matrix_2d

A 2D numpy array of pixels from an image in [h,s,v] format.

· output_filepath

Output file path with filename of where to store color palette.

· pastel light

Flag to convert light color palette to pastel.

pastel_normal

Flag to convert normal color palette to pastel.

· pastel_dark

Flag to convert dark color palette to pastel.

sat_pref_list

List of saturation preference flags for light, normal, dark color palettes.

· ratio dict

A dictionary that holds the ratio of base colors in an image and is used to identify the dominant color in an image.

base_color_dict

A dictionary of 2D numpy arrays for each of the 6 base colors.

· extracted colors dict

A dictionary of extracted colors in [h,s,v] format.

palette_dict

A dictionary of light, normal, and dark color palettes in hex format.

6.1.1 Detailed Description

Extracts colors given a matrix of HSV values extracted from an image.

6.1.2 Constructor & Destructor Documentation

```
__init__()
```

```
__init__ (

self,

hsv_img_matrix_2d,

output_filepath,

pastel_light = False,

pastel_normal = False,

pastel_dark = False,

sat_pref_light = False,

sat_pref_normal = False,

sat_pref_dark = False)
```

Extractor Constructor.

Parameters

self	The object pointer.
hsv_img_matrix_2d	A 2D numpy array of pixels from an image in [h,s,v] format.
output_filepath	Output file path with filename of where to store color palette.
pastel_light	Flag to convert light color palette to pastel.
pastel_normal	Flag to convert normal color palette to pastel.
pastel_dark	Flag to convert dark color palette to pastel.
sat_pref_light	Flag that gives preference to more saturated colors of the light color palette.
sat_pref_normal	Flag that gives preference to more saturated colors of the normal color palette.
sat_pref_dark	Flag that gives preference to more saturated colors of the dark color palette.

6.1.3 Member Function Documentation

check_pastel_conversion()

```
\begin{tabular}{ll} check\_pastel\_conversion ( \\ self ) \end{tabular}
```

Checks to see if any of the palettes should be converted to pastel.

Parameters

```
self The object pointer.
```

construct_palette_dictionary()

```
{\tt construct\_palette\_dictionary \ (} \\ self \ )
```

Constructs a dictionary of all the extracted color palettes in hex format.

The extracted color palettes are organized in the dictionary as follows: light background, light foreground, dark background, dark foreground, light palette, normal palette, dark palette.

construct_scheme_dictionary()

```
\begin{tabular}{ll} construct\_scheme\_dictionary ( \\ self ) \end{tabular}
```

Constructs a dictionary of color schemes by combining color palettes.

Light color scheme contains the normal and dark color palettes. Dark color scheme contains the normal and light color palettes.

Parameters

e object pointer.	self
-------------------	------

Returns

A dictionary of light and dark color schemes.

convert_pastel()

```
convert_pastel (
          self,
          hsv_color )
```

Converts/normalizes HSV color to pastel.

For values x in range [a, b], values x can be converted to the new range [y, z] with the following equation: $new_x = (z-y) * ((x-a) / (b-a)) + y$

Parameters

self	The object pointer.
hsv_color	List HSV color to be converted to pastel.

convert_pastel_dark()

```
convert_pastel_dark (
     self )
```

Converts dark palette to pastel.

Parameters

self	The object pointer.
------	---------------------

convert_pastel_light()

```
{\tt convert\_pastel\_light \ (} \\ self \ )
```

Converts light palette to pastel.

Parameters

```
self The object pointer.
```

convert_pastel_normal()

```
\begin{tabular}{ll} convert\_pastel\_normal & ( \\ self & ) \end{tabular}
```

Converts normal palette to pastel.

Parameters

```
self The object pointer.
```

run()

```
run ( self\ )
```

Main method for Extractor class.

Performs extraction of colors.

Parameters

self The object pointer.

6.1.4 Member Data Documentation

base_color_dict

```
base_color_dict
```

A dictionary of 2D numpy arrays for each of the 6 base colors.

extracted_colors_dict

```
extracted_colors_dict
```

A dictionary of extracted colors in [h,s,v] format.

hsv_img_matrix_2d

```
hsv_img_matrix_2d
```

A 2D numpy array of pixels from an image in [h,s,v] format.

output_filepath

```
output_filepath
```

Output file path with filename of where to store color palette.

palette_dict

palette_dict

A dictionary of light, normal, and dark color palettes in hex format.

pastel_dark

pastel_dark

Flag to convert dark color palette to pastel.

pastel_light

pastel_light

Flag to convert light color palette to pastel.

pastel_normal

pastel_normal

Flag to convert normal color palette to pastel.

ratio_dict

ratio_dict

A dictionary that holds the ratio of base colors in an image and is used to identify the dominant color in an image.

sat_pref_list

```
sat_pref_list
```

List of saturation preference flags for light, normal, dark color palettes.

The documentation for this class was generated from the following file:

· Extractor.py

7 File Documentation

7.1 __main__.py File Reference

Main script for PyPalEx.

Namespaces

· namespace pypalex

Python Palette Extractor: extracts color palettes from images.

• namespace pypalex.__main__

Functions

• main ()

Main script function.

• handle_args ()

Handles the arguments passed to PyPalEx.

• extract_color_palettes ()

Handles color extraction from image(s).

• setup_argument_parser ()

Sets up the argument parser for command line arguments.

• check_sources (filepaths, path=None)

Checks each of the sources provided and removes any bad sources.

check_path (path)

Check the path to make sure it exists.

set_global_args (args)

Sets the global variables using the arguments.

• check_source (filepath)

Checks to make sure the path leads to a file.

Variables

• list EXTRACTORS = []

List of Extractor class objects for each individual image.

• list PROPER_IMAGES = []

List of real/existing image file path(s).

• list FILENAMES = []

List of image filenames.

• list OUTPUT_FILEPATHS = []

List of output file path(s) for each image.

• str OUTPUT PATH = "

The path to the output directory where all JSON files will be saved.

str OUTPUT_TAIL = "-color_palette.json"

The tail to append to each output filepath.

• bool SAVE CHECK = False

Flag to check if user wants to save extracted color palettes.

bool SHOW_PREVIEW = False

Flag to show a preview of extracted palettes.

• bool PASTEL L = False

Flag to convert light color palette to pastel.

bool PASTEL_N = False

Flag to convert normal color palette to pastel.

• bool PASTEL D = False

Flag to convert dark color palette to pastel.

• bool SAT_PREF_L = False

Flag that gives preference to more saturated colors of the light color palette.

bool SAT PREF N = False

Flag that gives preference to more saturated colors of the normal color palette.

• bool SAT_PREF_D = False

Flag that gives preference to more saturated colors of the dark color palette.

7.1.1 Detailed Description

Main script for PyPalEx.

Used to run from the Command Line.

7.4 conversion_utils.py File Reference

Utilities for converting between RGB, HSV, HEX.

Namespaces

· namespace pypalex

Python Palette Extractor: extracts color palettes from images.

• namespace pypalex.conversion_utils

Functions

• rgb_to_hsv (rgb_array)

Converts RGB array [r,g,b] to HSV array [h,s,v].

hsv_to_hex (hsv_array)

Convert HSV array [h,s,v] to HEX string 'ffffff'.

hex_to_rgb (hex_str)

Convert HEX string 'ffffff' to RGB array [r,g,b].

hsv_to_rgb (hsv_array)

Convert HSV array [h,s,v] to RGB array [r,g,b].

• rgb_to_hex (rgb_array)

Convert RGB array [r,g,b] to HEX string 'ffffff'.

7.4.1 Detailed Description

Utilities for converting between RGB, HSV, HEX.

7.4.2 **Author(s)**

7.5 extraction_utils.py File Reference

Utilities for extracting colors from the image.

Namespaces

· namespace pypalex

Python Palette Extractor: extracts color palettes from images.

• namespace pypalex.extraction_utils

Functions

extract_ratios (hsv_img_matrix_2d)

Extracts the ratios of hues per pixel.

construct_base_color_dictionary (hsv_img_matrix_2d)

Constructs dictionary of base colors from an array of HSV pixel values.

extract_color_palettes (base_color_dict, sat_pref_list)

Extracts dominant light, normal, dark color palettes from each of the base colors.

check missing colors (base color dict, extracted colors dict)

Checks for any missing colors in the base color dictionary and borrows them from the surrounding colors.

generate_remaining_colors (extracted_colors_dict, ratios)

Generate the remaining black and white, and background and foreground colors.

extract_color_types (hsv_base_color_matrix_and_sat_prefs)

Extracts the dominant color types from a base color.

• get_left_and_right_colors (origin_color_name)

Gets the color names of the colors that are to the left and right of the originating color.

• borrow_color (extracted_colors_dict, origin, borrow_left, borrow_right)

Borrows a color from one of the extracted color types of the base colors.

• get_dominant_hue (extracted_colors_dict, ratios)

Calculates the dominant hue.

generate_black_and_white (dominant_hue)

Generates black and white color types using the dominant hue.

generate_background_and_foreground (dominant_hue, complementary_hue)

Generates the background and foreground colors.

sort by sat and bright value (hsv base color matrix)

Sorts the colors by their saturation and brightness values.

extract_dominant_color (hsv_color_type_matrix, sat_pref)

Extracts the dominant color from a color type.

check_missing_color_types (light_color, norm_color, dark_color, black_color, achromatic_light, achromatic
 —norm, achromatic_dark, achromatic_black)

Checks to make sure all the color types have been properly set.

calculate_centroid (hsv_color_type_matrix)

Calculates the centroid for a color type.

find_closest_to_centroid (hsv_color_type_matrix, centroid, sat_pref)

Finds a color from a color type that is closest to the centroid.

7.5.1 Detailed Description

Utilities for extracting colors from the image.

7.9 print_utils.py File Reference

Utilities for printing preview to the screen.

Namespaces

· namespace pypalex

Python Palette Extractor: extracts color palettes from images.

• namespace pypalex.print_utils

Functions

print_default_scheme_preview (hex_color_palette)

Prints the default color schemes to the terminal.

• get_color_escape (rgb_array, background=False)

Constructs ANSI color escape code based on an RGB list.

• get_rgb_palette (hex_color_palette)

Constructs an RGB [r,g,b] palette dictionary using a hex palette dictionary.

• get_ansi_color_codes (rgb_color_palette)

Constructs a ANSI escape code dictionary using a RGB [r,g,b] palette dictionary.

• generate_panes (background_ansi_color, ansi_colors1, ansi_colors2)

Generates panes based on two sets of ANSI color escape codes.

7.9.1 Detailed Description

Utilities for printing preview to the screen.

Note

Potential point for contributors to add different printing options, maybe even a printing option that displays in a
